

Editorial

Research in omics field has blossomed as one of the major focus around the world. Proteomics and bioinformatics resources are playing a vital role in the field of life science research. The resources that have contributed to the accomplishments of its members gave birth to the **Journal of Proteomics & Bioinformatics (JPB)-Open Access**. It aims to stimulate, conduct and publication of original research in its field, to provide a source of continuing proteomics, bioinformatics education, and to circulate such information to the readers for free of cost.

JPB is a journal for, of and by scientists. Its aim is very broad, and we consider that if the journal is to be recognized by its focus on multidisciplinary research in the field by review and distribute articles related to this field, this will help to improve its impact further. Articles published by JPB are under the terms of the Creative Commons Attribution License, this permits anyone to copy, distribute, transmit and

adapt the work provided the original work and source is appropriately cited. **Open access is a property of individual works, not necessarily journals or publishers.**

The application and development of omics in the real world has become a major industry. JPB currently running by omics publishing group, monitored by the efficient editorial board and **it has nearly ten thousand readers (e mail recipients)** -list attached as an appendix. Many new editorial board members have joined, all of whom have shown a significant interest with the journal and were selected for their expertise in specific proteomics and bioinformatics areas. It is with much pleasure that we welcome them. We are certain that their contribution as editorial board members will further improve the journal impact. In the future issues of the journal, we will share our thoughts on the vortex of exponential growth and fulfillment of our purpose and vision.

Editorial Board-Journal of Proteomics & Bioinformatics (JPB)-Open Access.
