Journal of Proteomics & Bioinformatics

Open Access

www.omicsonline.org

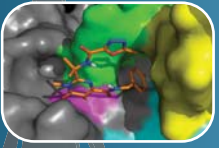

EDITORS & EDITORIAL BOARD

Proteomics is a term in the study of genetics which refers to all the proteins expressed by a genome; proteomics involves the identification of proteins determination of their role in physiological and pathophysiological functions. Bioinformatics is the analysis of biological information using computers and statistical techniques, Bioinformatics is more of a tool than a discipline, the tools for analysis of Biological Data.

The Open Access Journals are those which are freely available and accessible online to the reader. They neither have financial nor legal barriers. The proteomics & bioinformatics publication under the open access category ensures the peer-reviewed biomedical research.

In Proteomics & Bioinformatics, expert researchers explore this ever-changing field, providing the reader with a mix of review and methodology chapters which address the fundamentals of analysis methods, algorithms, data standards and databases.

Journal of Proteomics & Bioinformatics (JPB) furnishes all aspects of global protein analysis and function between the physical and life sciences to understand the biological processes. These types of journals call for a substantial effort to mine and interpret the data. The journals are specifically provoked in manuscripts that integrate functional or structural proteomic analysis using bioinformatics concepts and intramural views.

Journal of Proteomics & Bioinformatics-Open Access using online manuscript submission, review and tracking systems of Editorial Manager® for quality and quick review processing. Submit your manuscript at
